

Hello Alpha Juno User,

This is a beta version of Alpha Juno Control updated to run natively on Intel Machines (version 10.6 and above). Some features have been disabled (namely the ability to save mapped CC messages).

I encourage you to use this app to its full potential but understand that it's still in beta and you might see a hiccup here and there. I try my hardest to write "bulletproof" programs and would sincerely love any feedback you have, especially if you come across a bug.

Enjoy the program,  
-Jim
